

ADBRUF 'LINES UP' ECOLINE

A new, environmentally-friendly, water-based line marking paint, capable of forming demarcation and directional lining on most surfaces, including bitumen, has been launched by Dorset based road marking materials and specialist surfacing systems manufacturer **Adbruf Limited**.

The new product, called 'Ecoline', is manufactured to conform to BS EN 1871:2000 - Road Marking Materials – Physical Properties.

Versatile Ecoline is a low hazard, low odour and non-flammable material. It is based upon an exceptionally hard-wearing, solvent-free, acrylic resin system and has been specifically formulated to facilitate the safe installation of line marking. In addition, equipment is easily and safely cleaned simply by using clean tap water and detergent, if necessary.

Ecoline is designed for creating line marking on indoor and outdoor surfaces including roads, aircraft runways, car parks, factory floors, school playgrounds, walkways and sports surfaces. It bonds strongly to most surfaces and will not cause bitumen bleed. Where necessary, it can be reflectorised by applying glass beads to the wet surface.

Ecoline is available in highly opaque white, yellow, red, blue, green, black and primrose colours, can be applied by airless spray, roller, or brush, at wet a film thicknesses of 0.35mm, provided surface temperatures are above 10°C and humidity is less than 85%. At this thickness, coverage is approximately 2.8 square metres per litre, or 28 linear metres at 100mm wide. Depending upon the texture of the surface, one coat should be sufficient.

More information concerning Ecoline can be obtained from Adbruf Limited, Gibbs Marsh Trading Estate, Stalbridge, Dorset DT10 2RX. Tel: 01963 362640. Fax: 01963 363 762. Email: sales@adbruf.com Web site: www.adbruf.com
